(a) Slot-ablation effect
relative freeboard
wave steepness
relative depth
wave obliquity
profile type
berm
roughness permeability
toe berm
crest configuration
foreshore
0.0
0.1
0.2
0.3
mean |ΔŶ| when slot is zeroed [log10]
concept in null state
CCW-Net, concept active
unaligned, concept active
(b) Largest pair terms
wave steepness x relative depth
relative freeb x wave steepness
relative freeb x relative depth
wave steepness x profile type
relative depth x profile type
relative freeb x profile type
relative freeb x roughness perm
relative depth x foreshore
0.00
0.02
0.04
mean |pair term| [log10]
(c) Effect via absent concepts
full
unaligned
